

Simple, Strong & Secure

Showcase your project to attract more interest

“...opportunity is a reflection of information”

EZDataRoom's range of services accelerates the promotion and transaction of oil and gas deals. Our Online Data Room service is a unique platform to showcase projects when seeking partners and funding.

- Save you money
- Save everyone's time
- Extend your project to a wider audience
- Fulfil due-diligence obligations
- Inform you about the level of interest

How?

- Many companies can review a project at the same time
- Available 24/7 to suit busy schedules
- No initial travel for interested parties
- No supervision time, you focus on deal making
- Establish how serious a company is by monitoring their review activity

Apart from providing the legal framework for due diligence, the most powerful application of our online data room is to market projects more widely when seeking additional exploration or development funding.

More companies will review a project if no travel is involved and easy online access is available.

Our online data room is an 'information bridge' that provides high profile, but secure, exposure for your project in a convenient and cost efficient manner either before or after face-to-face meetings.

Unique Technology

Our online data room's revolutionary technology provides fast, secure, real-time interactive viewing of 2D/3D SEG Y (with overlaid interpretation), LAS files, office documents and graphics - all without the requirement to download any files.

There are three key benefits as a result of not downloading files:

- Speed** - no waiting for a file to download
- Security** - our security is second to none
- No File Size Limit** - view multi-gigabyte files with ease

No special software or plug-ins required - just view and manipulate the information using a standard web browser.

Time Benefit

Our online data room will speed up the divestment cycle and improve efficiency for all parties.

Unlike a traditional data room, which is historically labour intensive and costly to set up and run, we provide 24/7 global access to potential new business partners - monitored and administered around the clock.

Use an online data room to market farm-outs and divestments and for Due Diligence in legal transactions

Cost Benefit

Oil companies estimate that a physical data room costs many thousands of dollars a day to operate when all executive time and resources are taken into account. Often time will be spent dealing with companies whose main goal is to learn what they can for their own projects - a potential waste of your time.

Our data room site enables you to conveniently showcase sufficient information to satisfy all parties, while allowing your staff to focus on buyers who are genuinely interested in the featured business opportunity.

In this respect an online data room is both a filter for you in deciding who to bring into your offices for face to face meetings as well as a screening tool for potential investors.

Choosing the EZDataRoom option will save everyone time and money.

Security

The security and protection of our client's proprietary or licensed data is of paramount importance, and our software has been designed specifically for this purpose. It has been exhaustively tested by many major oil companies and has consistently surpassed expectations.

To ensure the highest level of security for your data our primary feature enables files to be viewed without being downloaded. Other elements include:

- User Name and Password issued to potential investors only on written instruction from the project owner
- Watermarking and other security features for all screen displays
- Variable access rights controlled by security administrator
- No download or printing of any files unless authorised

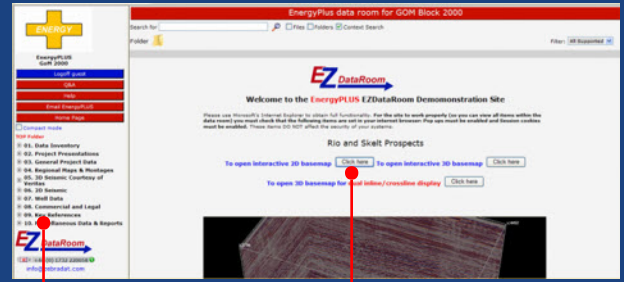

Summary

An exceptional opportunity is available to expand your horizons, attract more buyers, and make more effective use of your time through the power and convenience of an online data room from EZDataRoom. You might also want to consider our Project Introduction, Marketing and Project Literature services.....

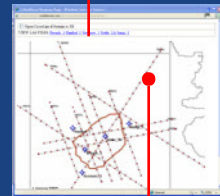

In addition our Online Data Rooms include the following features:

- Online Q&A with facility to allow questions and answers to be public or private
- Unlimited number of simultaneous users
- Ability to vary the 'rights and privileges' of individual users for individual files
- Dedicated project managers (geotechnical as well as IT)
- Free backup and archiving service available after project completion
- Online access for project managers to our statistics package, allowing you to review user activity and interest
- Unlike other online data rooms that require all files to be supplied in PDF format, EZDataRoom software accepts files in the most common office formats without conversion plus SEGY and LAS
