OVERVIEW: Traditional data rooms are serial events requiring constant supervision by key staff members and tie up hardware/software resources over an extended period. An EzDataRoom site is available 24/7 to multiple companies simultaneously, requires no supervision and allows valuable in-house resources to be used elsewhere. Therefore, it is extremely time and cost effective. New venture teams have to travel to review prospects often being restricted to an initial one or two day period. New venture teams can study the prospect for longer from their own offices without the need for unnecessary travel.

UNIQUE SOFTWARE: View all files without downloading. This means fast access, high security and no file size limit. This revolutionary new technology provides fast, secure, real-time interactive viewing of 2D/3D segy seismic, digital well logs, office documents and graphics files. NO special software, NO plug-ins - just view everything using a standard web browser.

ENHANCED MARKETING: EzDataRoom is a powerful extension to a 'Project Flyer' and should be considered as a 'Project Selling Tool'. An online data room is extremely convenient for your potential Buyers, a fact that encourages more companies to seriously review and consider your project.

>>Security

- ✓ Highest protection of Intellectual Property.
- ✓ User Name and Password issued to prospective buyers only with Seller authority.
- ✓ No downloads of any online files sent to buyers unless authorised.
- ✓ Access rights to all information controlled by security administrator.
- ✓ Watermarking of all documents and on-screen displays.

>>EzDataRoom Benefits

Sellers

- Provides fast and efficient global online access to asset sale & farm-out data.
- Include all Commercial, Legal and Technical information in one central site.
- The presentation facilities can be used for marketing purposes pre-Confidentiality Agreements.
- Maximise convenience for the purchaser by extending the review period and reducing travel.
- Prospective buyers are able to browse confidential information online with complete security.
- Post Confidentiality Agreements the conferencing feature can be used to jointly review important details.
- Site usage statistics reporting.
- Ultimate security to protect your intellectual property.
- Uses a standard web browser for all file viewing, NO special software or plug-ins required.
- No file size limit: Load 2D/3D SEGY seismic data sets + Complete LAS well logs suites + Associated reports, spreadsheets and graphics.

Buyers

- View and browse asset information online in detail and from anywhere in world.
- Reduce the need for time consuming and expensive travel.
- Evaluate & manipulate prospect information quickly and easily from your office or home.
- Have a New Ventures team work on the evaluation.
- Manipulate real data live, change seismic and log display parameters / attributes online.
- Participate in online web-conferencing with sellers to extract KEY project information.
- Uses a standard web browser for all information viewing.
- NO special software required OR large downloads needed to view information.
- File printing and download can be enabled for selected information with seller authority.
- Ultimate security to protect your systems.

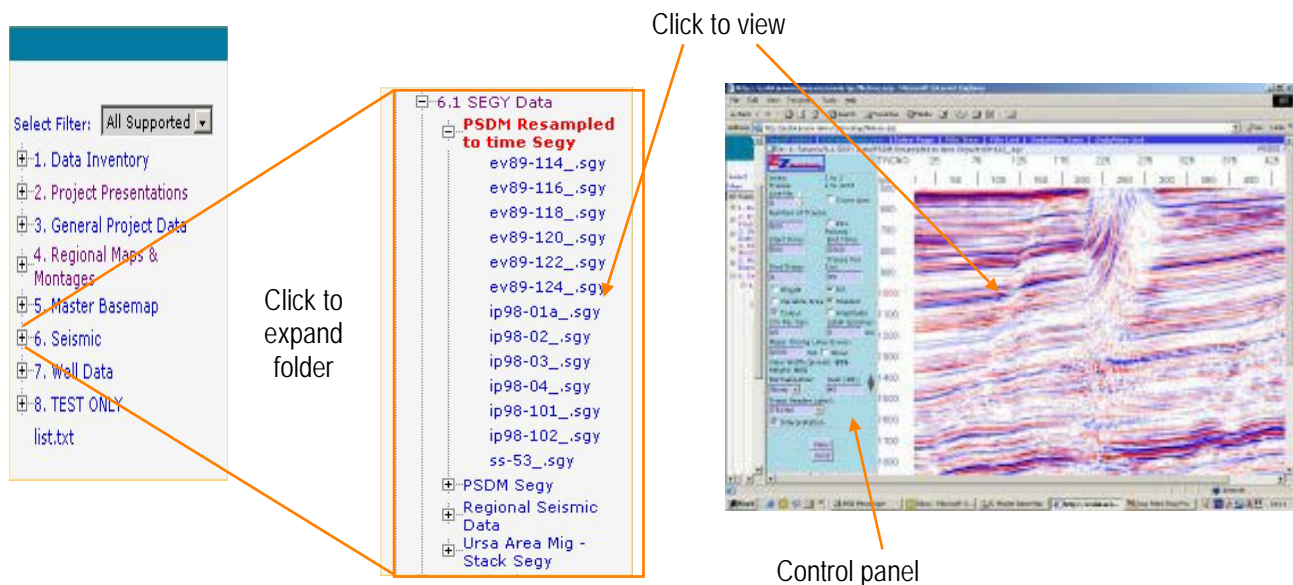

>>Simple to set up

EzDataRoom uses a familiar folder structure called 'File Tree' to contain information and data. Preparing an EzDataRoom is simply a matter of creating folders and sub-folders on a PC either according to our suggested layout, or with a structure of your own if more appropriate for your divestment. 'Copy and paste' files into the 'folder' structure and your EzDataRoom is ready to go - there is no need to reformat files - just send these data to us by FTP, courier etc. We create the interactive basemap(s) to link the seismic lines and well data in addition to conditioning files and setting relevant file protection permissions. Your virtual data room is ready to go live in a few days or at a specific date/time set by you.

>>Simple to use

Navigating around an EzDataRoom is easy, just 'point and click' to open folders and again to open files. Control panels enable the user to obtain the interactive view required.

>>File Tree

>>Online project storage

EzDataRoom is fast, convenient, secure and accessible to only those granted access. Use EzDataRoom for online storage of all project data and share it with partners. Use the web-conferencing facilities for online partner meetings and significantly reduce wasted time and travel.

>>In summary

Face to face meetings are still vital but the method of reviewing prospect data is improved. You save the expense and time of setting up and hosting an in-house data room.

With EzDataRoom many potential investors can review the same prospect at the same time and for longer. The serious potential investors ask questions and proceed further whereas the less interested drop out saving wasted time and resources on traditional data room activities.

The new technology used in EzDataRoom delivers improved security, speed of access, flexibility and power with benefits for the Seller and Buyer.
