

EzDataRoom Revolutionises Data Management

With older technology all you can see is a list of stored files

With EzDataRoom Archiving you can actually VIEW the files

With EzDataRoom Archiving Data Management becomes as efficient as you always hoped. EzDataRoom Archiving allows team members to view stored files before downloading to their local area increasing efficiency, saving time and costs. EzDataRoom Archiving uses the same WebDataView technology as our highly successful EzDataRoom online data room service.

Benefits of EzDataRoom Archiving:

- Fast viewing of files in your data store via a web browser
- Only authorised users have access to the secure site.
- Multiple simultaneous access by any number of local or remote authorised users
- Authorised users view the same files, so version control problems are reduced
- Private folders can be set up with limited access to specified users only
- Simple point, click and view. operation
- Authorised users can: upload, download, rename, create folders, delete folders and more
- 2D/3D seismic and well logs can be viewed interactively (including overlaid interpretation, etc)
- Wide range of graphics and MS Office© files are supported

Add **Oilelephant**, a web based GIS product to EzDataRoom Archiving.

Oilelephant is a hardcopy and electronic records management system that links with EzDataRoom Archiving.

Option 1 - Store everything on our servers for complete security and disaster recovery - we take care of backups across multiple servers.

Option 2 - Install on your own servers in-house or at a location suitable to you.

Option 3 - Combine with your existing EDMS to 'view' files interactively saving previous expenditure. EzDataRoom Archiving already links with many other systems.
