

Divestments are more successful with EzDataRoom

Asset divestments (farm-outs, asset sales or trades) require time, effort, resources and patience. EzDataRoom, with a long history of success, provides a range of services to make your project a success.

Project Promotion - The more companies that know of your project, the more interest & offers you will receive.

With 1300+ companies and 3000+ key decision makers registered to be notified of new projects, EzDataRoom will introduce your project to the right people in the right companies, distribute your flyer, a brief overview and your contact details.

Inclusion of your project on our Active Project web site www.ezdataroom.com and in our monthly update email to the industry compliments your project promotion.

Alternatively we can promote on a 'no names' basis.

We are a service company, do not claim a success fee and regularly work with Brokers and Banks.

"EzDataRoom streamlined the whole divestment process allowing us to focus on talks with interested companies"

Quote from a major oil company

Encourage more companies to review your project by removing the obstacles of time, travel and cost with an online data room. Include your 2D/3D seismic data, digital well logs, legal, commercial and supporting technical documents to enable an easy (but secure, post CA) online review of your project data from their desks anywhere in the world.

No travel, no hotels, no visas and a longer review period are significant incentives to review a project that might otherwise be rejected.

An online data room filters out less serious companies who would waste your time in a physical data room.

Our unique online data rooms are used by super-majors and independents alike because they are cost effective, secure, efficient and powerful.

Online Data Room - features and benefits

Unique Technology

- No file downloads required to view everything
- No file size limit, view multi-gigabyte files
- Include 2D/3D segy seismic data with interpretation
- Include digital well logs with geological markers
- No re-formatting of files, display the original
- Comprehensive search facilities
- No special software just a standard web browser

Enhanced Security

- No access to ODR unless granted by seller (post CA)
- No file downloads to users, unless authorised
- Watermarking of pages for security
- Monitor site user activity with our statistics package

Convenient & Efficient for users

- No travelling required
- Available 24/7 to suit busy schedules
- Many companies access the site at the same time
- No in-house workstation resources required
- No supervision time, you focus on deal making
- Customised site live soon after receipt of files
- Simple to use, just point and click

The software that powers EzDataRoom has passed all security audits by the major oil companies

EzDataRoom supports you and your project. You remain in total control at all times. We are, however, pleased to offer advice based on our many years of divestment experience.

Our Project Promotion Service extends your contact list so you receive more interest from more companies.

An Online Data Room provides an efficient and convenient structured platform for your reports, maps, presentations, spreadsheets, graphics, well logs and 2D/3D segy seismic for review by your invited companies.

EzDataRoom delivers unrivalled facilities and service at a cost that is insignificant to your project's value.
